FINANCIAL MATHEMATICS

Teacher Note: This session on Financial Mathematics will deal with **future and present value annuities**. A future value annuity is a savings plan for the future, whereas a present value annuity is a loan. There are two types of loans dealt with in this session: The first loan is one in which a learner borrows money from a bank and has to pay a certain number of equal repayments with interest. The second type of loan is one in which the learner deposits a large sum of money into the bank and the bank pays the learner equal amounts with interest over a given time period.

SECTION A: TYPICAL EXAM QUESTIONS

QUESTION 1 15 minutes

(a) Suppose that at the beginning of the month, R1000 is deposited into a bank. At the end of that month, a further R1000 is deposited and a further R1000 at the end of the next month. This continues for eight years. If the interest rate is 6% per annum compounded monthly, how much will have been saved after the eight year period? (4)

(b) Patrick decided to start saving money for a period of eight years starting on 31 December 2009. At the end of January 2010 (in one month's time), he deposited R2300 into the savings plan. Thereafter, he continued making deposits of R2300 at the end of each month for the planned eight year period. The interest rate remained fixed at 10% per annum compounded monthly. (4)

(1) How much will he have saved at the end of his eight year plan which started on the 31 December 2009? (4)

(2) If Patrick leaves the accumulated amount in the bank for a further three months, what will the investment then be worth? (4)

[16]

QUESTION 2 15 minutes

(a) David takes out a bank loan to pay for his new car. He repays the loan by means of monthly payments of R4000 for a period of five years starting one month after the granting of the loan. The interest rate is 24% per annum compounded monthly. Calculate the purchase price of his new car. (4)

(b) Peter inherits R400 000 from his father. He invests the money at an interest rate of 12% per annum compounded monthly. He wishes to earn a monthly salary

from the investment for a period of twenty years starting in one month's time.

How much will he receive each month? (4)

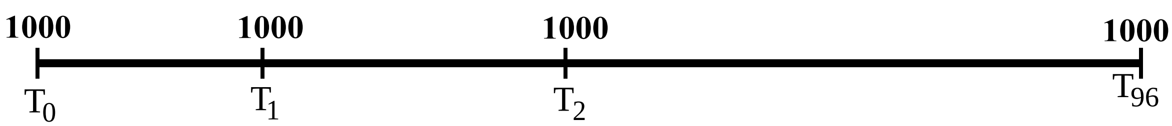
SECTION B: SOLUTIONS AND HINTS TO SECTION A

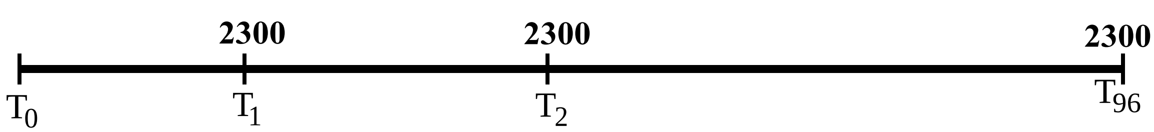
QUESTION 1

(a) Draw a timeline



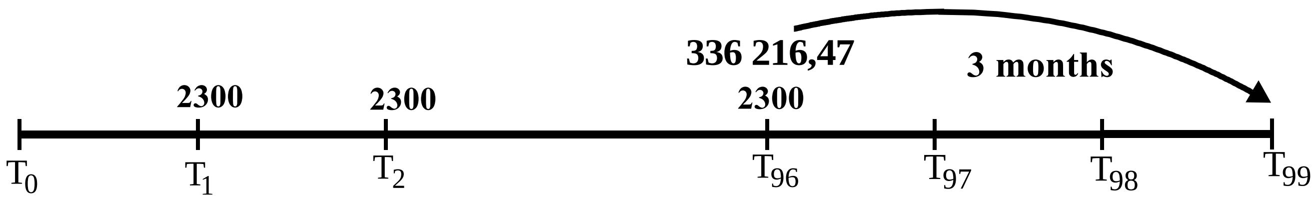
(a)	$F=\frac{x\left[(1+i)^n-1\right]}{i}$ $\therefore F=\frac{1000\left[\left(1+\frac{0,06}{12}\right)^{97}-1\right]}{\frac{0,06}{12}}$ $\therefore F=\text{R}124\ 442,68$	In this example, the duration of the loan is 8 years (96 months). However, the number of payments made is 97 because of the first payment being made immediately. This means that in the first month, two payments of R1000 were made.	✓ correct formula ✓ $n=97$ ✓ $\frac{0,06}{12}$ ✓ answer (4)

(b)(1) Draw a timeline



(b)(1)	$F = \dfrac{x\left[(1+i)^n - 1\right]}{i}$ $\therefore F = \dfrac{2300\left[\left(1+\frac{0,10}{12}\right)^{96} - 1\right]}{\frac{0,10}{12}}$ $\therefore F = R336\ 216,47$ In this example, the duration of the loan is 8 years (96 months). However, the number of payments made is 96 because of the first payment being made one month after the start of the savings plan.	✓ correct formula ✓ $n = 96$ ✓ $\frac{0,10}{12}$ ✓ answer (4)

(b)(2) Draw a timeline

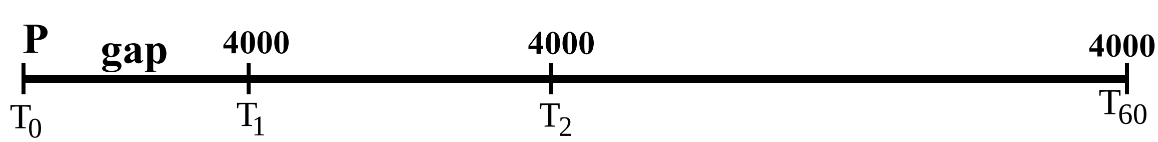


(b)(2)	$A = P(1+i)^n$ $\therefore A = 336\ 216,47\left(1+\frac{0,10}{12}\right)^3$ $\therefore A = R344\ 692,12$ Since there will no longer be any further payments of R2300 into the annuity, all we now need to do is grow the R336 216,47 for three months using the formula $A = P(1+i)^n$ to calculate the future value of the investment after the further three months.	✓ correct formula ✓ $n = 3$ ✓ $P = 336\ 216,47$ ✓ answer (4)

[16]

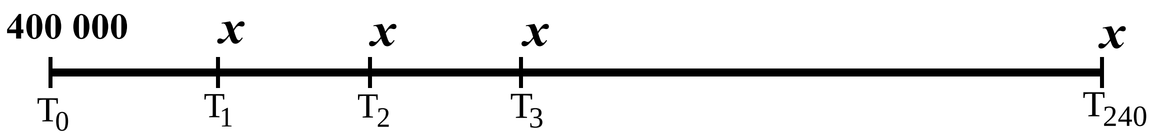
QUESTION 2

(a) Draw a timeline



(a)	$P=\dfrac{x\left[1-(1+i)^{-n}\right]}{i}$ $\therefore P=\dfrac{4000\left[1-\left(1+\frac{0,24}{12}\right)^{-60}\right]}{\frac{0,24}{12}}$ $\therefore P=R139043,55$ There must always be a gap between the loan (P) and the first payment in order for the present value formula to work.	✓ correct formula ✓ $n=60$ ✓ $\frac{0,24}{12}=0,02$ ✓ answer (4)

(b) Draw a timeline



(b)	$400000=\dfrac{x\left[1-\left(1+\frac{0,12}{12}\right)^{-240}\right]}{\frac{0,12}{12}}$ $\therefore \dfrac{400000\times 0,01}{\left[1-(1,01)^{-240}\right]}=x$ $\therefore x=R4404,34$ This is an example of a loan where you pay money into a bank and the bank pays you monthly amounts with interest.	✓ correct formula ✓ $n=240$ ✓ $\frac{0,12}{12}=0,01$ ✓ answer (4)

QUESTION 1

Mpho takes out a retirement annuity that will supplement his pension when he retires in thirty years' time. He estimates that he will need R2 500 000 in this retirement fund at that stage. The interest rate he earns is 9% per annum compounded monthly.

(a) Calculate his monthly payment into this fund if he starts paying immediately and makes his final payment in 30 years' time. (5)

(b) The retirement fund does not pay out the R2 500 000 million when Mpho retires. Instead he will be paid monthly amounts, for a period of twenty years, starting one month after his retirement. If the interest that he earns over this period is calculated at 7% per annum compounded monthly, determine the monthly payments he will receive. (5)

QUESTION 2

QUESTION 1

Mark's small business, called Postal Emporium, purchases a photocopying machine for R200 000. The photocopy machine depreciates in value at 20% per annum on a reducing balance. Mark's business wants to buy a new machine in five years' time. A new machine will cost much more in the future and its cost will escalate at 16% per annum effective. The old machine will be sold at scrap value after five years. A sinking fund is set up immediately in order to save up for the new machine. The proceeds from the sale of the old machine will be used together with the sinking fund to buy the new machine. The small business will pay equal monthly amounts into the sinking fund, and the interest earned is 18% per annum compounded monthly. The first payment will be made immediately, and the last payment will be made at the end of the five year period.

(a) Find the scrap value of the old machine. (2)

(b) Find the cost of the new machine in five years' time. (2)

(c) Find the amount required in the sinking fund in five years' time. (1)

(d) Find the equal monthly payments made into the sinking fund. (4)

(e) Suppose that the business decides to service the machine at the end of each year for the five year period. R3000 will be withdrawn from the sinking fund at the end of each year starting one year after the original machine was bought.

(1) Calculate the reduced value of the sinking fund at the end of the five year period due to these withdrawals. (3)

(2) Calculate the increased monthly payment into the sinking fund which will yield the original sinking fund amount as well as allow for withdrawals from the fund for the services. (5)

QUESTION 2

(a) R2000 is immediately deposited into a savings account. Six months later and every six months thereafter, R2000 is deposited into the account. The interest rate is 16% p.a. compounded half-yearly. How long will it take to accumulate R100 000? (7)

(b) How long will it take to repay a loan of R400 000 if the first quarterly payment of

R17000 is made three months after the granting of the loan and the interest rate is 16% per annum compounded quarterly? (6)

TRIGONOMETRY

Teacher Note: Trigonometry is an extremely important and large part of Paper 2. Ensure that learners master all the basic rules and definitions and be able to apply these rules in many different types of questions. In this session learners will concentrate on Grade 12 Trigonometry which involves compound and double angles. These Grade 12 concepts will be integrated with the trigonometry studied in Grade 11. Before attempting the typical exam questions, learners must familiarise themselves with the basics in Section B of the learner notes.

TRIGONOMETRY

Teacher Note: Trigonometry is an extremely important and large part of Paper 2. Ensure that learners master all the basic rules and definitions and be able to apply these rules in many different types of questions. In this session learners will concentrate on Grade 12 Trigonometry which involves compound and double angles. These Grade 12 concepts will be integrated with the trigonometry studied in Grade 11. Before attempting the typical exam questions, learners must familiarise themselves with the basics in Section B of the learner notes.

TOPIC 1 : CALCULUS – GRAPHICAL APPLICATIONS

Teacher Note: TOPIC 1: Cubic graphs are easy to sketch and are worth a lot of marks in the matric exam. Make sure the learners learn how to sketch these graphs.

TOPIC 2: Linear Programming requires learners to be able to translate from words into maths, which is quite a challenge. However, if the words "at least", "at most" ,"may not exceed"and "must not be more than" are fully explained and understood, then this topic can be well answered. Revise the linear function in detail before approaching this topic.

3. TOPIC 2: LINEAR PROGRAMMING

QUESTION 1: 20 minutes

A clothing company manufactures white shirts and grey trousers for schools.

- A minimum of 200 shirts must be manufactured daily.
- In total, not more than 600 pieces of clothing can be manufactured daily.
- It takes 50 machine minutes to manufacture a shirt and 100 machine minutes to manufacture a pair of trousers.

	***y*-intercept:** $(0;-4)$ ***x*-intercepts:** $0=2x^3-6x-4$ $\therefore 0=x^3-3x-2$ $\therefore 0=(x+1)(x^2-x-2)$ (using the factor theorem) $\therefore 0=(x+1)(x-2)(x+1)$ $\therefore x=-1$ or $x=2$ $(-1;0)$ $(2;0)$ **Stationary points:** $f(x)=2x^3-6x-4$ $\therefore f'(x)=6x^2-6$ $\therefore 0=6x^2-6$ (At a turning point, $f'(x)=0$) $\therefore 0=x^2-1$ $\therefore x=\pm 1$ $f(1)=-8$ $f(-1)=0$ Turning points are $(1;-8)$ and $(-1;0)$ **Point of inflection:** $f'(x)=6x^2-6$ $\therefore f''(x)=12x$ $\therefore 0=12x$ $\therefore x=0$ $f(0)=-4$ Point of inflection at $(0;-4)$ Alternatively: The *x*-coordinate of the point of inflection can be determined by adding the x-coordinates of the turning points and then dividing the result by 2. $x=\frac{(1)+(-1)}{2}=0$	✓ $(0;-4)$ ✓ $0=2x^3-6x-4$ ✓ $0=(x+1)(x^2-x-2)$ ✓ $0=(x+1)(x-2)(x+1)$ ✓ $(-1;0)$ $(2;0)$ ✓ $f'(x)=6x^2-6$ ✓ $0=6x^2-6$ ✓ $x=\pm 1$ ✓ $(1;-8)$ and $(-1;0)$ ✓ $f''(x)=12x$ ✓ $(0;-4)$ ✓ $\frac{(1)+(-1)}{2}$ ✓ $x=0$

	The graph is represented above	✓ intercepts with the axes ✓ turning points ✓ shape ✓ point of inflection **[17]**

QUESTION 2

	At the turning point $(2\,;9)$, we know that $f'(2)=0$ $f(x)=ax^3+5x^2+4x+b$ $\therefore\ f'(x)=3ax^2+10x+4$ $\therefore\ f'(2)=3a(2)^2+10(2)+4$	✓ $f'(x)=3ax^2+10x+4$ ✓ $f'(2)=12a+24$ ✓ $a=-2$ ✓ $y=-2x^3+5x^2+4x+b$ ✓ $9=-2(2)^3+5(2)^2+4(2)+b$ ✓ $b=-3$ ✓ $f(x)=-x^3+5x^2+4x-3$ **[7]**

	$\therefore f'(2) = 12a + 24$ $\therefore 0 = 12a + 24$ $\therefore -12a = 24$ $\therefore a = -2$ We can now substitute $a = -2$ into the original equation: $y = -2x^3 + 5x^2 + 4x + b$ In order to get the value of *b*, substitute the point $(2;9)$ into this equation: $\therefore 9 = -2(2)^3 + 5(2)^2 + 4(2) + b$ $\therefore 9 = -16 + 20 + 8 + b$ $\therefore 9 = 12 + b$ $\therefore -b = 3$ $\therefore b = -3$ The equation of the cubic function is therefore $f(x) = -x^3 + 5x^2 + 4x - 3$

TOPIC 2 : LINEAR PROGRAMMING

QUESTION 1

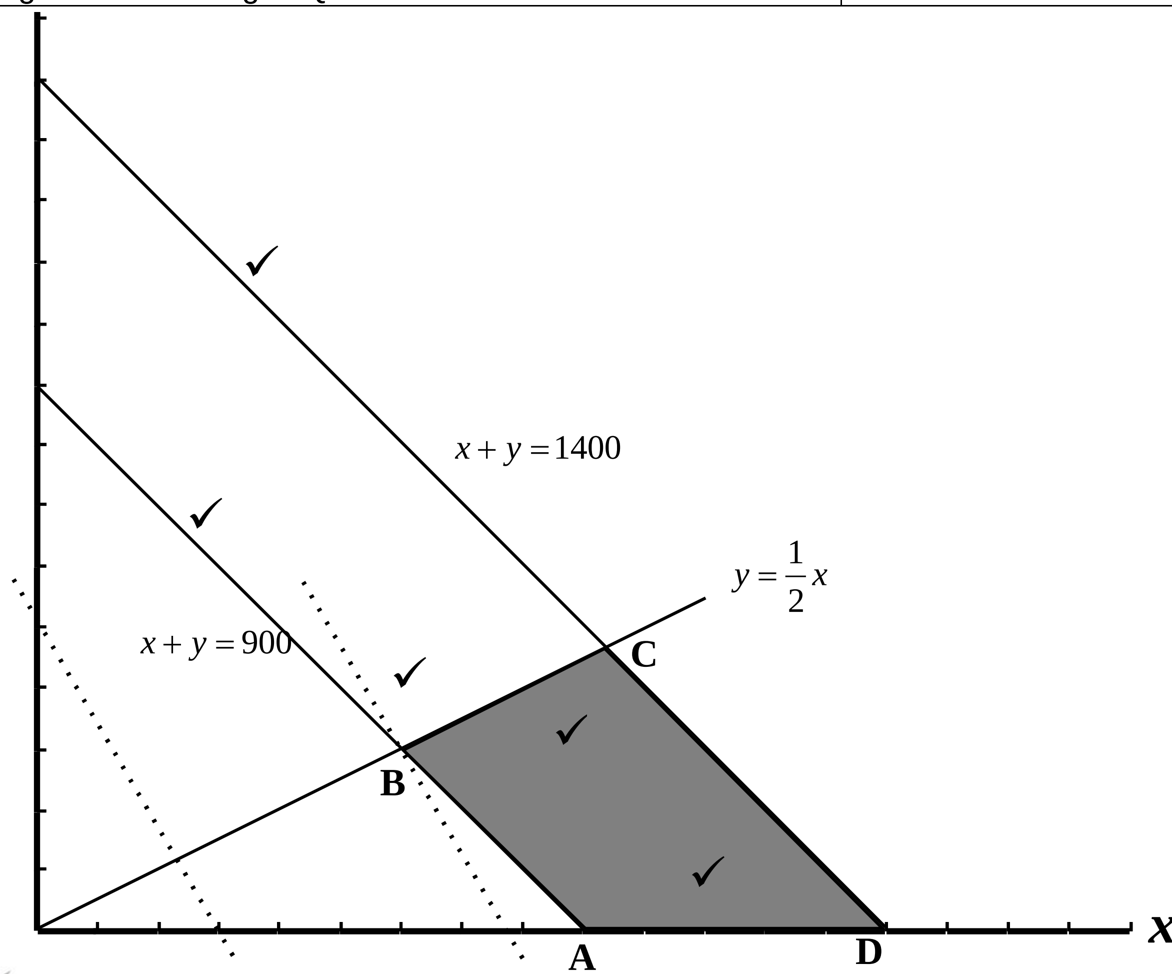
Let $x =$ chemical P and $y =$ chemical Q $x+y\geq 900$ $x+y\leq 1400$ $x\geq 2y$ $\therefore -2y\geq -x$ $\therefore y\leq \frac{1}{2}x$ The objective function is $C=5x+3y$ $\therefore 5x+3y=C$ $\therefore 3y=-5x+C$ $\therefore y=-\frac{5}{3}x+\frac{C}{3}$ Cut on *y*-axis is 5 Cut on *x*-axis is 3 The most cost effective mixture is the point at which the cost is a minimum.The minimum cost is at point B$(600;300)$. Therefore, the most cost effective mixture is: 600kg of P and 300kg of Q.	✓ $x+y\geq 900$ ✓ $x+y\leq 1400$ ✓ $x\geq 2y$ ✓ $y\leq \frac{1}{2}x$ ✓ $C=5x+3y$ ✓ $y=-\frac{5}{3}x+\frac{C}{3}$ ✓ 600kg of P ✓ 300kg of Q See graph for other marks **[13]**



QUESTION 2

2.1	$x+y\geq 10$ $y\geq \frac{1}{2}x$ $y\leq 8$	✓ $x+y\geq 10$ ✓ $y\geq \frac{1}{2}x$ ✓ $y\leq 8$ (3)
2.2	see below	
2.3	$\mathrm{C}=40x+40y$ $\therefore 40x+40y=\mathrm{C}$ $\therefore 40y=-40x+\mathrm{C}$ $\therefore y=-1x+\frac{\mathrm{C}}{40}$	✓ $\mathrm{C}=40x+40y$ ✓ search line on diagram ✓ $(2;8)$ ✓ $(4;6)$ ✓ $(6;4)$ (5)
